haniffhamdan.com (Portfolio) 

SUMMARY

Electronic Engineer background with Full-stack developer with expertise in Java, C#, React.js, and backend API development. Experienced in Agile methodologies and UAT, with a strong foundation in both web development and system integration. Proven track record of optimising system performance and improving user experiences. I possess a strong foundation in digital electronics, microprocessors, and communication systems. Additionally, my expertise in both web development and embedded systems has provided me in low-level programming and hardware-software interactions.

WORKING EXPERIENCE

Software Engineer
Heitech Padu. Bhd

September 2023 - Present

1. JPJ Teknologi Digital (Maintaining)

- Role: Backend Developer
- Tech Stack: Java, Spring Boot, SQL, REST APIs, Git
- Project Scope: Maintained and enhanced the backend features of the JPJ Teknologi Digital system, focusing on efficient CRUD operations and ensuring compatibility with frontend systems for vehicle registration and digital services.
- Achievements:
 - Optimised database queries, improving data processing speed by 20% and reducing system errors.
 - Conducted comprehensive UAT to assess system functionality, ensuring a smooth user experience.
 - Collaborated with the frontend team to ensure seamless API integration and worked within an Agile environment, contributing to daily Scrum meetings and sprint planning.
- Results: Successfully delivered key backend features on time, contributing to the smooth operation of the platform with enhanced performance and user satisfaction.

2. KPDRM (Project Revamp)

Role: Full-stack Developer

- Tech Stack: C#, .NET, SQL, REST APIs, Git
- Project Scope: Led the revamp of the KPDRM platform to modernise system architecture, streamline backend processes, and improve system performance.
- Achievements:
 - Redesigned and developed new webpage interfaces for improved user experience, ensuring compatibility between frontend and backend designs.
 - Optimised SQL queries, reducing data retrieval times by 30%, and integrated RESTful APIs to ensure seamless communication between system components.
 - Conducted comprehensive UAT, identifying and resolving critical bugs, leading to a 20% reduction in reported issues.

- Collaborated with a cross-functional team in an Agile environment, actively participating in sprint planning, backlog refinement, and daily standups to ensure timely project delivery.
- Results: Improved overall system performance by 25%, significantly enhancing user experience and backend efficiency.

SYSTEM DEVELOPER (PROTEGE)
NIISE, IRIS CORPORATION. BHD

Jun 2023 - September 2023

System Developer (PROTEGE) – NIISE, IRIS CORPORATION BHD

- Role: System Developer (PROTEGE)
- Tech Stack: C#, .NET, ASP.NET, React.js, Java, SQL, REST APIs
- Project Scope: Re-engineered the company's immigration system product, focusing on connecting it with web APIs to enhance functionality, system performance, and data transmission.
- Achievements:
 - Reverse engineer fingerprint scanners with a web application using ASP.NET, enabling seamless interaction between the scanner and the web interface for secure user authentication.
 - Developed and implemented the backend API to handle fingerprint scanner input, ensuring smooth communication between hardware and the web application.
 - Challenges: The integration required real-time authentication, which was optimised by enhancing API performance and ensuring secure transmission of biometric data.
- Backend JSON Extraction from PDF – JavaScript, React.js, TypeScript
 - Built a robust backend system to extract and parse JSON data from PDF files using JavaScript, ensuring accurate data retrieval and formatting for front-end display.
 - Developed a frontend sample using React.js and TypeScript to display extracted JSON data, providing users with a clean, interactive interface.
 - Implemented validation mechanisms to ensure data consistency and reduce errors during PDF parsing.
- Technical Documentation for SDLC
 - Created comprehensive technical documentation for the Software Development Lifecycle (SDLC), covering phases such as requirement analysis, system design, testing, and deployment.
 - Documented best practices for API integration and system troubleshooting, serving as a reference guide for future development teams.

Software Developer (Internship)
BRAVONET SDN. BHD

Jul 2022 - Jan 2023

Working as Front End Dev

Accomplishments:

Tech Stack: Bootstrap, JavaScript, CSS, Git, GitHub, Agile, CI/CD

Project Scope:

- Contributed to the development of a web prototype using modern frontend technologies, focusing on enhancing user interface components and optimizing code for better performance.

Frontend Development:

- Designed and developed interactive web pages using Bootstrap and JavaScript, ensuring responsive layouts and cross-browser compatibility.
- Challenges: Ensured compatibility across multiple devices and browsers, optimising the site for mobile users.
- Results: Improved mobile responsiveness

Collaboration & Agile Development:

- Actively participated in Agile practices, attending daily standups, sprint reviews, and retrospectives.
- Assisted in creating sprint tasks and collaborated with senior developers to identify and resolve software bugs.

- CI/CD: Gained experience in the CI/CD pipeline, assisting with code deployment and ensuring smooth integration between development and testing environments.

Testing & Bug Fixing:

- Conducted testing of client-server network components to ensure performance and adherence to design requirements.
- Identified and fixed bugs in the front-end UI, leading to a smoother user experience and fewer post-deployment issues.
- Documentation & Knowledge Sharing:
 - Created technical documentation for workflows, onboarding processes, and best practices for the development team.

Impact: Reduced onboarding time for new developers by 10% by streamlining the documentation of code and workflow practices.

SKILL

Electronic and Design

- PLC
- Microprocessor and Interface
- Arduino

Simulation Software

- Simulation Software
- AutoCad
- SolidWork
- Proteus (Electronic Design)

Programming

- Bootstrap
- TypeScript
- Javascript (React, Node.js, NEXT.js, Express)
- C# (DotNet)
- C++
- Java(Spring, Dart)
- Python
- SQL

EDUCATION

UNIVERSITI MALAYSIA PAHANG

2019 - Jan 2023

Bachelor of Engineering, major in Technology Electronic (Computer System)

AIESEC (O R G A N I S A T I O N)

Director of Outgoing Global Volunteer

Key Responsibility:

- Board meetings with executive to review and track progress
- Provide training members on our OGV team job scope or task given
- Provide customers support and IR Partner support (HE) at all stages process
- Explore new target market to promote IR partners projects

EXCO DISCIPLINE AND SAFETY

Perwakilan Mahasiswa Residen Pelajar 4 (PEKA 4)

Key Responsibility:

- Board meetings with executive to review and track progress.
- Provide training members on our Peka team job scope or task given in event.
- Public Relations with safety organisation for "fired-real" event.
- Make sure students in resident 4, knew the S.O.P and act for discipline issues.

POLITEKNIK KOTA BHARU

2015 - 2018

Electronic (Communication System), Engineering

CERTIFICATE

- JavaScript: Algorithms and Data structure.
- Foundations of User Experience (UX) Design.
- Responsive Web Design. Wireframe Creation
- Applying Advanced LookML
- concepts in Looker
- Exploring Data with Looker
- Google Cloud Essential

REFERENCE
